

# Do It Yourself

## Create your first Power BI Report

Try to create your own Power BI report to maximize the learning effect! If you use your own data for this purpose, you will also benefit from the increasing significance of the report. In the next step you can even derive first business decisions from the results.

### Keep in mind

Building a report is a creative, multi-stage process. You will be constantly confronted with new questions and ideas, which you can gradually incorporate into your report with the help of the newly learned functions.

### Some general considerations

- Always try to find the visualization that best represents your data and is suitable for drawing conclusions.
  - Use **Conditional Formatting**
  - Take advantage of the variety of visualizations in Power BI. In addition to the visualizations shown in this course, there are more, and this list will be continuously extended.
- Use the **Alignment Tools** to align visualizations with each other.
- Insert **text boxes and images**. These can be company or product logos, photos or icons.
- Use the existing **themes**. If required, you can adapt them to your requirements. Ensure that the overall impression is uniform and harmonious in terms of color.
