

Module 4: Find Facts Faster Activities

Question 1: While sorting through some trinkets at a garage sale, you find the image below. There is a note scrawled on the back that says, "ancestor of manga". Since you are interested in manga, you decide you would like to see the original.

In what temple is the original located?

Answer: Our search expert says that you can use Search by Image to answer this question. The temple is called Kozanji (which is spelled a variety of ways in English).

Question 2: What is 41 degrees Celsius in Fahrenheit?

Answer: It is 105.8 degrees. A query like [41 c in f] will give you the conversion of Celsius to Fahrenheit.

Question 3: If you have 100 Rupiah, how much do you have in Yen?

Answer: Using the query [100 rupiah in yen] will find you today's approximate rate of exchange.

Question 4: You have a recipe for making one quart of bar-be-que sauce and you want to make ten quarts instead. If the original recipe calls for 4 tablespoons of sugar, how many cups of sugar should you use?

Answer: It is 2.5 cups of sugar. You can either ask Google to directly calculate [4 tablespoons * 10 in cups], or you can first ask for [4 tablespoons * 10] and then convert [591.470591 milliliters in cups].

Question 5: In 1883, a volcano on the island of Krakatoa in Indonesia erupted. The dust from this massive volcano affected weather as far away as the United States. The volcano has recently become active again. Using the query [krakatoa volcano] and the time filter, identify the following pieces of information.

Which of these newspaper articles was published in 1883? Remember to search for [krakatoa volcano] and use time filtering.

- 1) Volcano Mystery Solved
- 2) Venus has Volcanic Character
- 3) The Volcano Heard Around the World
- 4) Java's Canopy of Fire: A Volcano's First Effort

Answer: 4 - Searching in News for [krakatoa volcano] allows you access to the custom time filter, where you can limit yourself to searching within newspaper articles from 1883.
