Activity 3

Advice and Feedback

Corsets are bodices that are designed to fit and shape close to the body in a fashionable silhouette. These structures have been popular in the fashion industry since the 17th century and are still used today to control the bust, waist, and hips. Corsets are faceted with a material called boning, which was first made with whale bone but has since been replaced with plastic and sometimes metal.

Activity 4

Answers

You can add volume to clothing using drapes, flare, and fabric. The draping technique is used to gain added volume with a softer look. You can also add fabric to a garment using a flare, which is a free swinging element that is applied with a slash and spread method. Finally, volume can be added to a garment by adding more or less fabric.
