

## **Activity 10: Warehouse Storage**

*Time: 10 to 15 Minutes*

We discussed numerous pieces of storage equipment in a prior module. Take a few minutes to review that information. Next, make a list of the last five or six things you ordered from an online retailer. Think about which storage method is best for each item, considering factors like the size of the item, its popularity, and if it required special storage instructions. Now think about the five most popular items dispatched from your warehouse and ask yourself if there is a better way to store them. What about the five least popular items? Are they taking up valuable space?
