

Exercise 1

Use a recursive CTE to generate a list of all odd numbers between 1 and 100.

Hint: You should be able to do this with just a couple slight tweaks to the code from our first example in the video.

Exercise 2

Use a recursive CTE to generate a date series of all FIRST days of the month (1/1/2021, 2/1/2021, etc.) from **1/1/2020** to **12/1/2029**.

Hints:

- Use the DATEADD function strategically in your recursive member.
- You may also have to modify MAXRECURSION.
