

Exercise 1

Update your calendar lookup table with a few holidays of your choice that always fall on the same day of the year - for example, New Year's.

Exercise 2

Using your updated calendar table, pull all purchasing orders that were made on a holiday. It's fine to simply select all columns via `SELECT *`.

Exercise 3

Again using your updated calendar table, now pull all purchasing orders that were made on a holiday that **also** fell on a weekend.
